Managing costs of crop production is a challenge every year. 2018 is definitely projected to be a year when getting a positive return on input investment needs to be analyzed for each input type.

On Wednesday, February 28th the Mid and Early Career Producers and Agribusiness Professional Group will meet at S & S Hometown (211 South Maple Avenue; Oconto Falls), starting at 12:30 p.m. The planned focus of discussion will be on fertilizer inputs, maximizing on-farm nutrient resource returns, and getting the most out of other crop inputs.

Attendees will steer the discussion to the topics of their choosing and may include all types of different agronomic inputs, from seed selection and planting rate to pest management decision making. The discussion will be facilitated by Nutrient and Pest Management Outreach Specialist Jamie Patton and Marinette/Oconto County UW-Extension Crops Agent Scott Reuss. On-your-own lunch is available on-site, whether before, during, or after the discussion.

If you have more questions about this event, please contact Sarah Mills-Lloyd at 920-834-6845 or sarah.millsllloyd@uwex.edu.
